SCORECARD

4.º trimestre de 2016

## S&P - Índices de Renta Variable de América Latina: Comentarios de diciembre, 2016

Después de tres años consecutivos de pérdidas, 2016 fue claramente el año de la recuperación para América Latina. El S&P Latin America BMI, que durante el año registró un rendimiento de 32.5% calculado en dólares (USD), superó el rendimiento de importantes índices globales, como el S&P 500® y el S&P Global 1200, que representa a las 1,200 empresas de mayor tamaño y liquidez en el mundo.

Dentro de la región, todos los mercados tuvieron un buen desempeño en su moneda local. Perú generó el rendimiento más elevado con 58% y México el más bajo con 7%. Sin embargo, si consideramos los rendimientos calculados en dólares, México fue el único país cuyo rendimiento estuvo por debajo del mercado en más de 10%, debido a la drástica devaluación del peso mexicano con respecto al dólar estadounidense en 2016. Este escenario tuvo grandes consecuencias para los índices regionales calculados en dólares, como el S&P MILA Pacific Alliance Composite. La región de la Alianza del Pacífico incluye a Chile, Colombia, México y Perú; y este índice, en el que México representa más del 55%, tuvo un modesto rendimiento de 3%. No obstante, los inversionistas del mercado mexicano tendrían motivos para celebrar, ya que los rendimientos en peso mexicano durante el mismo periodo alcanzaron 23%. Los índices regionales que excluyen a México y Brasil, como el S&P MILA Andean 40, tuvieron un rendimiento superior al mercado en todas las monedas locales y también en dólares, promediando rendimientos en el rango de 20%.

A pesar de la reactivación de los mercados latinoamericanos en 2016, aún falta mucho camino por recorrer para que los rendimientos a mediano y largo plazo vuelvan a territorio positivo en cuanto a su cálculo en dólares. Como fue mencionado, esta situación está fuertemente determinada por la devaluación del peso mexicano, la cual tuvo un impacto negativo en el último trimestre de 2016 en todos los índices calculados en otras monedas.

¿Cómo fue el desempeño de los sectores en América Latina? Con excepción del sector inmobiliario, que tuvo un rendimiento de -2%, el sector industrial, que prácticamente no registró variaciones y el sector de telecomunicaciones, que generó un modesto 3%; todos los demás sectores tuvieron un año impresionante. Los sectores con mejor desempeño fueron el de energía (95%), salud (66%) y materiales (59%). El éxito de estos sectores se debió a las contribuciones de compañías energéticas como Petrobras y compañías de materiales como Vale, ambas brasileñas, que experimentaron un alza vertiginosa en el precio de sus acciones durante el año. Los cambios en el escenario político brasileño en 2016 y eventos internacionales como los Juegos Olímpicos de Río de Janeiro generaron un gran aumento en la confianza del mercado a partir de expectativas positivas, lo que provocó el crecimiento de la región completa.

Brasil fue el mercado más destacado de la región. Analizando diversas estrategias que miden el desempeño a partir de diferentes tipos de factores, es posible observar que el S&P/BOVESPA Enhanced Value Index tuvo un año extraordinario, alcanzando un rendimiento de 66% en reales brasileños y 105% en dólares. Sin embargo, considerando resultados a mediano y largo plazo, el S&P/BOVESPA Low Volatility tuvo el mejor rendimiento ajustado al riesgo, registrando un menor riesgo por porcentaje de rendimiento.

El otro mercado que se destacó fue Perú, que tuvo los rendimientos más elevados durante el año. El S&P/BVL Peru General Index, que es el principal benchmark peruano, generó un rendimiento de casi 61% en dólares y 58% en soles peruanos. El S&P/BVL Peru Select Index, que busca medir el desempeño de las empresas de alta capitalización del mercado local, tuvo rendimientos aún mejores: 67% en dólares y 64% en soles peruanos durante el año. Y mejor aún, los inversionistas del mercado peruano serían testigos de los mayores rendimientos a largo plazo ajustados al riesgo: cerca de 6% en el periodo de tres años y 3% en el periodo de cinco años, con una volatilidad relativamente baja.

The S&P MILA Pacific Alliance MidCap, the S&P MILA Pacific Alliance MidSmallCap, and the the S&P MILA Pacific Alliance SmallCap indices were launched October 3, 2016.

All information presented prior to the index launch date is back-tested. All information presented prior to an index's Launch Date is hypothetical (back-tested), not actual performance. The back-test calculations are based on the same methodology that was in effect on the index Launch Date. Complete index methodology details are available at [www.spdji.com](http://www.spdji.com).

S&P Dow Jones Indices defines various dates to assist our clients in providing transparency. The First Value Date is the first day for which there is a calculated value (either live or back-tested) for a given index. The Base Date is the date at which the Index is set at a fixed value for calculation purposes. The Launch Date designates the date upon which the values of an index are first considered live: index values provided for any date or time period prior to the index's Launch Date are considered back-tested. S&P Dow Jones Indices defines the Launch Date as the date by which the values of an index are known to have been released to the public, for example via the company's public website or its datafeed to external parties. For Dow Jones-branded indices introduced prior to May 31, 2013, the Launch Date (which prior to May 31, 2013, was termed "Date of introduction") is set at a date upon which no further changes were permitted to be made to the index methodology, but that may have been prior to the Index's public release date.

Past performance of the Index is not an indication of future results. Prospective application of the methodology used to construct the Index may not result in performance commensurate with the back-test returns shown. The back-test period does not necessarily correspond to the entire available history of the Index. Please refer to the methodology paper for the Index, available at [www.spdji.com](http://www.spdji.com) for more details about the index, including the manner in which it is rebalanced, the timing of such rebalancing, criteria for additions and deletions, as well as all index calculations.

Another limitation of using back-tested information is that the back-tested calculation is generally prepared with the benefit of hindsight. Back-tested information reflects the application of the index methodology and selection of index constituents in hindsight. No hypothetical record can completely account for the impact of financial risk in actual trading. For example, there are numerous factors related to the equities, fixed income, or commodities markets in general which cannot be, and have not been accounted for in the preparation of the index information set forth, all of which can affect actual performance.

The Index returns shown do not represent the results of actual trading of investable assets/securities. S&P Dow Jones Indices LLC maintains the Index and calculates the Index levels and performance shown or discussed, but does not manage actual assets. Index returns do not reflect payment of any sales charges or fees an investor may pay to purchase the securities underlying the Index or investment funds that are intended to track the performance of the Index. The imposition of these fees and charges would cause actual and back-tested performance of the securities/fund to be lower than the Index performance shown. As a simple example, if an index returned 10% on a US \$100,000 investment for a 12-month period (or US \$10,000) and an actual asset-based fee of 1.5% was imposed at the end of the period on the investment plus accrued interest (or US \$1,650), the net return would be 8.35% (or US \$8,350) for the year. Over a three year period, an annual 1.5% fee taken at year end with an assumed 10% return per year would result in a cumulative gross return of 33.10%, a total fee of US \$5,375, and a cumulative net return of 27.2% (or US \$27,200).

S&P Dow Jones Indices receives compensation in connection with licensing its indices to third parties. Past performance of an index is not a guarantee of future results.

It is not possible to invest directly in an index. Exposure to an asset class represented by an index is available through investable instruments based on that index. S&P Dow Jones Indices does not sponsor, endorse, sell, promote or manage any investment fund or other investment vehicle that is offered by third parties and that seeks to provide an investment return based on the performance of any index. S&P Dow Jones Indices makes no assurance that investment products based on the index will accurately track index performance or provide positive investment returns. S&P Dow Jones Indices LLC is not an investment advisor, and S&P Dow Jones Indices makes no representation regarding the advisability of investing in any such investment fund or other investment vehicle. A decision to invest in any such investment fund or other investment vehicle should not be made in reliance on any of the statements set forth in this document. Prospective investors are advised to make an investment in any such fund or other vehicle only after carefully considering the risks associated with investing in such funds, as detailed in an offering memorandum or similar document that is prepared by or on behalf of the issuer of the investment fund or other vehicle. Inclusion of a security within an index is not a recommendation by S&P Dow Jones Indices to buy, sell, or hold such security, nor is it considered to be investment advice.
